Ensuring the Authenticity of Remdesivir

Gilead is committed to patient safety and ensuring that people have accurate information about investigational remdesivir, including how it is accessed and administered. We are actively monitoring for fraudulent offers of illegitimate remdesivir to protect patients from products that might be dangerous and lead to serious and life-threatening harm.

**Facts about genuine remdesivir:**

- Remdesivir is approved in the United States for use under an Emergency Use Authorization (EUA) and can only be accessed through the request of a treating physician.
  - Remdesivir is only administered intravenously in a hospital setting under the care of a physician.
  - Remdesivir is not taken orally and is not available in a capsule or tablet form.
- Authentic remdesivir, manufactured by Gilead Sciences, Inc., will include the GILEAD name and logo on the label, and is dispensed in a vial with a blue cap.
  - Vials with a red cap may also be distributed through the EUA. These have been manufactured by Gilead for use in our clinical trials.
- Remdesivir is not sold online.
  - The authenticity of products acquired outside of the legitimate supply chain cannot be verified by Gilead.

If you believe you have purchased or have been offered counterfeit remdesivir, please report it to the FDA and to anticounterfeiting@gilead.com.
